WE HAVE A THEN FOR ANY WHEN.
DEAR READER,

Tesvolt is a solution-driven technology company headquartered in the heart of Germany. We combine a hands-on approach with a deep strategic understanding of the energy market. It is our mission to design and build high-quality, dependable power storage devices – to make our customers’ businesses more cost-efficient, and to ensure a rapid and lasting return on their investment.

We focus on our customers’ real-world needs and objectives – be they an SME interested in exploring the advantages of load shifting, or a company with an off-grid project in a region with no mains electricity. Whatever the challenge, we will deliver a tailor-made solution.

Because we have a then for any when.

Yours sincerely,

Daniel Hannemann
(Founder and CEO)

Simon Schandert
(Founder and CTO)
DEAR READER,

Tesvolt is a solution-driven technology company headquartered in the heart of Germany. We combine a hands-on approach with a deep strategic understanding of the energy market. It is our mission to design and build high-quality, dependable power storage devices – to make our customers' businesses more cost-efficient, and to ensure a rapid and lasting return on their investment.

We focus on our customers' real-world needs and objectives – be they an SME interested in exploring the advantages of load shifting, or a company with an off-grid project in a region with no mains electricity. Whatever the challenge, we will deliver a tailor-made solution.

Because we have a then for any when.

WHEN YOU HAVE A RELIABLE SOURCE OF POWER IN THE MIDDLE OF NOWHERE, THEN YOU PROBABLY HAVE A TESVOLT BATTERY SYSTEM.
TESVOLT IS INTERNATIONAL.

It might be a desert. Or a jungle. Or a rural area of a country unable to supply electricity nationwide. Whatever the situation, Tesvolt makes sure you have the cheapest and cleanest off-grid energy supply. We provide solutions as flexible as they are modular, allowing you to grow your business at the speed you want. And if you suddenly need on-site power for your latest business venture, we will send a team of experienced specialists right away – overnight, if that’s what you want. Our systems are not only durable and attractively priced, their components are also safe enough to be permitted in the cargo hold of commercial aircraft.
TESVOLT IS COST-EFFICIENT.

When electricity storage has ceased to be a cost driver, and instead has become a new revenue stream, then there is a good chance you have invested in one of our battery systems. It gives you significant independence from the energy market and its volatile prices – and even more important: You have a surprisingly quick return on investment. And that is not just profitable, it is also deeply satisfying.
When cost-efficiency is child's play, then our battery system might just be the reason.
When something has worked well for 30 years, then it might just be a Tesvolt battery system.
TESVOLT IS DURABLE.

Purchasing a Tesvolt battery system gives you access to highly advanced technology – and it buys you (at least) 30 years’ reliability. You can look forward to hassle-free, low-cost and completely safe operation. So you can finally focus on more pressing issues, such as investing the savings generated by your battery system into growing your business, spending more time with friends and family, and eventually – after about ten years – forgetting you even own a battery system.
TESVOLT IS RELIABLE.

The Tesvolt battery system won’t catch fire, explode, leak or do anything to distract you from more important tasks. Tesvolt has a zero tolerance attitude – to danger and risk. But is highly tolerant of extreme pressure, heat and cold. Each battery cell is being kept safe and sound – making sure you can relax at all times.
WHEN YOU'RE RELAXED ABOUT THE SAFETY OF YOUR POWER SOURCE, THEN IT MAY WELL BE OUR BATTERY SYSTEM.
WHEN YOU HAVE ANY QUESTION, THEN DON´T HESITATE TO ASK US.
